MYER & SONS, Bridgeville, Delaware

MYER'S EARLY ELBERTA

The peach that pays best of all. Elberta was a sensation and is still a good peach, **Myer's Early Elberta** is a new sensation and a much finer peach. This is the perfected Elberta, which ripens at the desired time and has the size. Is absolutely free from disease and is all that can be asked for and more than we ever hoped to be able to place on the market. Compare this peach with the best yellow market sort the world ever had **ELBERTA**. It ripens 6 to 10 days earlier just when a good peach is wanted. Elberta has been planted everywhere and when they ripen there are so many that the prices are not fancy. **Myer's Early Elberta** being earlier, of better quality and more beautiful, will command a much higher price in the markets than Elberta all the time. The tree is more hardy in both bud and tree. The fruit of the most delicious flavor, of large size, a beautiful yellow with a red blush on the sunny side, free of fuzz. **Myer's Early Elberta** is a persistent bearer and an excellent shipper, beautiful to look at and the best of all to eat.

Those who plant orchards now of **Myer's Early Elberta** will reap a rich reward before the Country gets full of them as did those who first planted Elberta. We have only a limited amount of 2 to 3 ft. June buds to offer this season at 25c each \$15 per 100. Send in your orders at once don't delay or you may be too late.

Myer's Early Elberta

ST. REGIS EVERBEARING

BEARS FIRST, LAST AND ALL THE TIME.

RASPBERRIES FOR FOUR MONTHS! That's what you get when you plant St. Regis—the new everbearing variety. Moreover they are not only raspberries, but raspberries of the very highest grade.

THE variety has been aptly termed "the early 'till late" variety; for it is the first red raspberry to give ripe fruit, while it continues to produce berries without intermission until late in October.

St. Regis is of pure American blood and of ironclad hardihood, the canes enduring the severest cold uninjured and are wonderfully prolific. Unlike Belle de Fontenay, Henrietta, Marvel of Four Seasons and all other so-styled everbearing red raspberries that have preceded it, (and many others that are not everbearing), its foliage never suffers by sunburn or scald, nor is its growth of cane impaired by the heat or drought of summer.

In addition to the bright crimson color and large size of the fruit, it is so firm and rich in sugar that it will stand shipping two hundred miles, arriving at market in first class order; and it can readily be kept in perfect condition for several days after being gathered.

The merits of this truly reliable, everbearing raspberry may be summarized as follows:

1. It is the earliest of all red raspberries.
2. It is wonderfully prolific; the first, or main crop, being far greater than that of any other red variety known.
3. It gives a crop of fruit all summer and autumn, fruiting on the old canes in generous quantities until late in August. By this date, berries begin to ripen upon the young, i. e., current year's canes, which continue to produce berries in increasing numbers until late autumn; in fact, until severe frost.
4. Berries are bright crimson, of large size and of surpassing quality—rich, sugary, with full raspberry flavor. They are of exceedingly meaty, firm texture and keep in good condition longer, after being gathered, than any other red raspberry. As a shipper it is unexcelled.
5. The canes are of stocky, strong growth with a great abundance of dark green leathery leaves.
6. It succeeds upon all soils, whether light and sandy or cold heavy clay, and the canes are absolutely hardy.

BEARS THE FIRST SEASON

St. Regis yields a crop of fruit the season it is planted. Plants of it planted in early April gave ripe berries on June 20th of the same year. For four weeks thereafter the yield was heavy and the canes continued to produce ripe fruit freely without intermission, until the middle of October. The berries were large and beautiful, firm and full flavored to the very last.

UNITED LITHO. & PRG. CO., ROCHESTER, N. Y.

Price \$2.00 per 100; \$8.00 per 500; \$15.00 per 1000.

INTRODUCED BY J. T. LOVETT

THE JOY BLACKBERRY

Brings joy to all who grow, sell or eat it.

Unites superlative quality, iron-clad hardiness and great productiveness

A business berry and like a good business man, may be depended upon every time.

Its history is as interesting as fiction; how Mr. Jacob Miehle of Atlantic County, New Jersey, a blackberry grower for over fifty years, found it growing in a secluded spot; how he planted it in his garden and for many years watched it develop as a father watches his child; how he tested its hardiness and its productiveness in every way he could think of, and so on to the end of the chapter. but space will not permit me to give it here; suffice it to say, the Joy Blackberry has always brought joy to everybody who has had any thing to do with it—joy indeed to Mr. Miehle when its purchase by me, at a large sum, relieved him of pressing demands and joy to the writer in securing such a prize at any price; constant joy and nothing but joy during the years I have been testing it. That is why I have named it Joy and I firmly believe it will continue to bring joy to everybody who has anything to do with it; to the market grower in large crops and large returns; to the commission merchant who sells the fruit, to the shop keeper who retails it and last but not least, to the amateur gardener in the home garden. No one who partakes of its delicious, health imparting fruit can fail to enjoy it.

It may be briefly described as follows: The canes are of stocky, vigorous habit—so stout and strong it needs no staking—with abundant large five fin-

gered leafage; yields very heavily *every* year and *all* the canes are loaded with fruit; (I have never known any variety, either Blackberry or Raspberry, with such an inherent propensity to bear fruit as the Joy blackberry). The canes are of ironclad hardihood, never to my knowledge having been injured by cold (in the winter of 1911-12 every blackberry in my trial grounds was damaged more or less except the Joy, which came through with every bud and terminal in perfect condition). Its canes have never been affected, even a little bit, by orange rust or other fungous disease and I believe it is immune to them.

A plant of Joy Blackberry from a photograph.

The berries are large and almost as thick through as they are long—a characteristic of the variety—and are coal black. In rich, luscious flavor it surpasses by far all other Blackberries I have ever grown. It is not an early variety—ripening in midseason—with Ward, Blowers and Kittatinny. It has been given a thorough test for five years and has not developed a defect and I believe it to be the Blackberry of the future; destined to become as popular among Blackberries as the Gandy and Myer have been among Strawberries or the Cuthbert, Miller, Brilliant and the St. Regis are among Raspberries—all of which were sent out in the world from the Monmouth and Bridgeville Nurseries in years ago.

PRICES:

Root cutting plants, each 15c; dozen, \$1.50; 100, \$10.00; 1000, \$75.00.
